Statement of newness and distinctiveness

The Hole Plug is made of an LDPE Plastic which is a key distinction that the mining market is demanding, as when inserting down a drill hole this provides the flex in the product to enable it to fit and provide a snug fit into variety of hole sizes. The other new feature with this product is that it has horizontal protrusions or 'grip' lines as well as vertical protrusion lines at the top half of the plug, meaning that it wedges into the hole once it reaches the desired point, and stops slump failure when back filling drill hole. The horizontal lines also mean the hole plug can be cut down for small hole size along these guide lines and due flexibility of the plastic.

Summary

Product name

Drill Hole Plug for Mining & Exploration Industry

Status

Registered

Priority date

30 Aug 2018

Classification

Class08-01

Class22-03

Ownership

Current owner DYNAMICS G-EX PTY LTD
